STRICTLY DESIGN DK APS

Vester Boulevard 17

DK – 8920 RANDERS NV

DENMARK

Instructions regarding chairs with built-in footrests:

- The footrest is intended solely to support the feet and must therefore **not be used as a seat**.
- Incorrect use may damage the chair's mechanism.
- The chair must **not be lifted by the extended footrest**, as this may also damage the mechanism.
- The chair is intended for **one person at a time**, within the normal weight range.
- The footrest is extended by pressing both hands against the armrests towards the upper part of the backrest while simultaneously raising your legs.
- The backrest can be reclined further by using the handle on the inside of the armrest. To return the backrest to its original position, lean forward while releasing the handle.
- The footrest is retracted by leaning forward and pushing the footrest down with your feet.
- When the chair's mechanism is being used/activated, there should be **no small children or other objects underneath the chair**, as there is a risk of injury from getting caught or pinched in the mechanism.
- Chairs with a headrest function are operated while seated by either pushing or pulling the headrest with both hands.
- Leather should be maintained by cleaning it with a clean cloth that has been thoroughly wrung out in clean water. Over time, leather may require the application of a suitable leather conditioner or soap flakes.
- Avoid placing furniture too close to an open fireplace or other heat source, or in direct sunlight, as this may dry out the materials.
- People who use strong medication may excrete substances through the palms of their hands and neck that can damage or dissolve leather and PVC products. For this reason, leather chairs are **not recommended for this group**. Fabric chairs are preferable.
- **The warranty is void in the event of incorrect use.**
